Summary

Business Analyst working on systems that move money in Singapore: award disbursements in a polytechnic financial aid module, and AI monitoring for NETS' SGD MEPS+ (RTGS) settlement transactions. Focused on transaction accuracy, clear requirements and data-driven scoping, from stakeholder workshops to acceptance. Builds my own products with AI tools and is moving toward product ownership in payments.

Work Experience

AvePoint | Singapore *Business Analyst* | Nov 2025 – Present

Temasek Polytechnic STAR – Financial Aid Module

- Specified the award disbursement flow end to end, covering award transactions, accounting entries and fund transfers to students, with precise rules so every amount and posting is correct.
- Defined award transaction reports for the financial aid and finance teams, setting the fields, totals and edge cases needed for figures to match the underlying transactions.
- Validated transaction, fund transfer and report accuracy during UAT, and tracked defects through to resolution.
- Led stakeholder communication between Temasek Polytechnic and the delivery team, and translated business requirements into a sprint backlog of user stories.
- Managed the award eligibility criteria backlog across Financial Aid and Edusave schemes, and led TP through phasing the remaining criteria into Phase 2a and 2b.

NETS Solutions – Smart Monitoring MVP (Enterprise Compute Initiative)

- Delivered a Smart Monitoring MVP for NETS, Singapore's national payment network, under the Enterprise Compute Initiative (ECI), working closely with small teams of developers and data scientists.
- Scoped the MVP's two AI/ML use cases for SGD MEPS+ (RTGS) transactions: liquidity projection and transaction anomaly detection, narrowing anomaly detection to the highest-priority types to keep the MVP deliverable.
- Led and conducted requirements workshops with NETS product strategy and engineering stakeholders, confirming settlement and position logic and alert-first monitoring for the MVP.
- Maintained the requirements register and FSD linked by requirement ID, produced a data guideline defining the critical transaction datasets, and prepared milestone deliverables for Acceptance Test Sign-Off.

MaivenPoint Work-Study Programme

- Ranked 1st in the November 2025 MaivenPoint Business Analyst trainee cohort before moving onto client delivery projects in Singapore.

Featured Project

snipcam | *iOS daily video journal (SwiftUI, AVFoundation)* | Jun 2026 – Present | Try the TestFlight beta

- Designed and built a private daily video journal: tap to record a fixed 3-second snip, and each day's snips stack into a chronological reel to replay and share.
- Core experience includes a local-first library, plus a Life Feed and Favourites to doomscroll your own past moments instead of other people's lives.

Education: New York University | New York, NY *Bachelor of Arts, Marketing and Business* | GPA: 3.5 | TOEFL: 110 | Minor: Business of Entertainment Industries | Award: Gallatin Merit Scholarship, Drexel's Dean Scholarship | Relevant Coursework: Consumer Behavior, Global Marketing Strategy, Decision Models and Analytics, Brand Strategy & Planning.

Skills:

- Requirements Workshops & Specifications (FSD)
- User Stories, Backlog Grooming & Sprint Planning
- User Flows & Process Diagrams (Figma)
- UAT, Defect Tracking & Data Validation
- Stakeholder Management (Finance, Product, Engineering)
- Data Analysis & Performance Tracking
- Payments & Settlement Domain (RTGS, Disbursements)
- Agile/Scrum Methodologies
- AI Tools: Claude, Cursor, Lovable
- SwiftUI, React Native (Expo), Git, PostHog
- A/B Testing, Competitive & Market Research
- English (fluent), Vietnamese (native)
